

DOC4TC

Easy adjustment of your product documents to the required formal output on TEAMCENTER®

Documentation is an important part of the PLM process. Technical guides, design documents, bidding documents, correspondences and other document types accompany all the stages of the product's lifecycle. Different documents often require different formatting, leading to adjustment of the documents to the required output on multiple platforms, which requires manual navigation between these platforms and the PLM environment.

With DOC4TC, this is no longer the case. Developed by McKit Systems, DOC4TC is a software solution for all required document types for your product within TEAMCENTER® environment. Other than supplying you with all the tools you need for the adjustment of each document, DOC4TC also turns this adjustment into an integral part of the PLM process, making it easy and intuitive while ensuring the highest quality of the document products.

Using DOC4TC can improve the PLM process in the following key areas:

Automatic document formatting

Other than placing the ability to adjust all the required types of product documents within TEAMCENTER® environment, DOC4TC also automatically creates the different formatting elements required for each type and offers automatic collection of relevant information, saving time by allowing quick input of the required data into the document.

Quick printing

Printing of product documents – especially technical designs – can now be done in one click, sending all of the needed materials to the printer, with no need to navigate between related TEAMCENTER® objects.

Easy Conversion

DOC4TC offers quick and easy conversion of your product's relevant documentation into PDF format, for efficient distribution to other parties including regulatory authorities.

DOC4TC Advantages:

- Easy conversion between various file formats (e.g. CAD/Office to PDF/TIFF).
- Stamp & Watermark using TEAMCENTER® metadata.
- Automatic creation of manuals with headers, footers, table of contents, page numbering, bookmarks & hyperlinks based on TEAMCENTER® structures.
- Smart and flexible data collection for all the relevant TEAMCENTER® items and structures.
- Supports workflows and release processes (e.g. signature sheets).
- Templates for complex processing requirements, easily managed by predefined settings.
- 4-tier / Active Workspace.
- TEAMCENTER® integrated shortcut menus.

Solution Focus:

Automate your document information

Auto-collection of documents by business rules for improved process quality and upload conversion results back to TEAMCENTER® according to configurable logic.

External Trigger

An interface which enables processing and printing of engineering documents from TEAMCENTER® according to requests from external systems as ERP.

Complete integration of TEAMCENTER reports

Add TEAMCENTER® reports to your documents wherever necessary.

Manage your files

DOC4TC offers you complete freedom in adding and removing documents, arranging your document sequence and organizing the file order, all within TEAMCENTER® environment.

Get all the elements you need for your documents

Embed stamps and watermarks with status, structure and user information.

Get support for all types of document files

Including property and field updates for Office documents and automatic title block updates for CAD files.

Easily convert your product documents

Choose between manual or workflow conversion and use DPF tracker to control all conversion jobs within TEAMCENTER®.

Keep your product documents protected

A variety of security measures is available for your documents including PDF encryption, blocking of editing functions, digital signatures, digital rights management and blackening of texts.

Print your documents

DOC4TC provides you with a print center for sending documents to any printer in the network. The output order and parameters are under your full control.
